

Unified Dataset

- Note
- 1. Data from 2021 and 2022 were preprocessed using consistent methods and are of higher quality than 2020 data due to improved quality assurance procedures.
 - For languages present in both 2020 and 2021/22 datasets, the 2021/22 data is used.
 - For languages present in both 2021 and 2022 datasets, the data are merged, with 2022 data taking precedence for overlapping words due to its recency.
 - 2. Data from 2024 were preprocessed using different methods than the 2021/22 data.
 - Manual comparison and selection of datasets is required for languages that appear in both 2024 and 2021/22 collections.
 - 3. All datasets are randomly split into 80% training data, 10% development data, and 10% test data.
 - 4. For ben/bur/ger/gle/ita/per/swe/tha (some target languages from the 2022 task), the test set values were from a [public dataset](#) that uses the same tool as in the shared tasks ~~independently obtained by our team and processed to match the available train/dev set format as closely as possible.~~

Language	Code	Data Samples	Origin
English	eng_us	41680	2021
Dutch	dut	10348	2021 + 2022
Armenian (Eastern)	arm_e	10000	2021
French	fre	10000	2021
