

Unified Dataset

- Note
- 1. Data from 2021 and 2022 were preprocessed using consistent methods and are of higher quality than 2020 data due to improved quality assurance procedures.
 - For languages present in both 2020 and 2021/22 datasets, the 2021/22 data is used.
 - For languages present in both 2021 and 2022 datasets, the data are merged, with 2022 data taking precedence for overlapping words due to its recency.
 - 2. Data from 2024 were preprocessed using different methods than the 2021/22 data.
 - Manual comparison and selection of datasets is required for languages that appear in both 2024 and 2021/22 collections.
 - 3. For training, the data amount for each language is set to 1000 and the data samples are randomly selected if there are more available.
 - 4. All datasets are randomly split into 80% training data, 10% development data, and 10% test data.
 - 5. For ben/bur/ger/gle/ita/per/swe/tha (some target languages from the 2022 task), the test set values were from a [public dataset](#) that uses the same tool as in the shared tasks

Language	Code	Data Samples	Origin
American English	eng_us	41680	2021
Dutch	nld	10348	2021 + 2022
Eastern Armenian	hye	10000	2021
French	fra	10000	2021
Georgian	kat	10000	2021
Serbo-Croatian (Latin)	hbs	10000	2021
Hungarian	hun	10000	2021
Japanese (Hiragana)	jpn	10000	2021
Korean (Hangul)	kor	10000	2021
Vietnamese (Hanoi)	vie	10000	2021
Hindi	hin	4500	2020
Lithuanian	lit	4500	2020
Arabic	arb	3000	2024
Bulgarian	bul	3000	2024
Indonesian	ind	3000	2024
Macedonian	mkd	3000	2024
Classical Persian	fas_cls	3000	2024
Russian	rus	3000	2024
Spanish	spa	3000	2024
